A migration worth doing

Angular Migration – what is it and why do it?

In the summer of 2017 Google announced it would be ending support for AngularJS by 2021. This means that all viable applications written in AngularJS will need to migrate to Angular, lest they become unmaintainable. There are multiple methods of migration, which you can see outlined in our white-paper.

If you still expect to need to use and maintain your AngularJS application after 2021 it is advisable that you migrate. We can already see community support for the framework dying, making its use untenable. Moreover, Angular makes many improvements over AngularJS, with features such as the use of typescript, Angular CLI and AOT compilation making significant efficiency gains.

Further, as others begin to migrate you may face compatibility issues. In their 'Roadmap24' Avaloq announced the migration of their AFP Framework. This means that all Avaloq clients using the framework for their Banklets will have to migrate. Equally, those wishing to use Avaloq's new open banking architecture and their open APIs (i.e. REST services etc.) will also have to migrate.

SUPPORT BASED ON OUR OWN EXPERIENCE

Confinale has experience with hybrid migration, migrating our own reclaimer® product from AngularJS to Angular. As a fairly large and complex application, the migration of reclaimer® posed many challenges. Through these, we have developed a broad understanding and strong skill-base. We will take your code and, using their expertise and experience, our capable team will take care of the migration for you. We can circumvent the problems you would face taking up this task yourselves.

SAVE TIME AND RESOURCES

Our experienced team of specialists will get the job done efficiently and quickly, allowing you to get on with 'more important' work. Our migration-experience will allow us to avoid the problems that you would face taking up this task yourself.

GET READY FOR AVALOQ'S OPEN BANKING ARCHITECTURE AND AFP UPDATE

In their 'Roadmap 24' Avaloq announced their intention to migrate their open APIs and AFP to Angular 6+. We can keep you ahead of the curve and ensure compatibility by migrating your applications.

CONFINALE

We are 100% committed to delivering your application migration, from start to finish!

We will manage the entire process, from analysis to implementation. Our experienced team will provide need specific solutions, with your input throughout. Flexible working means that we will meet your exacting specifications, working on-site or remotely.

The end product will be a state-of-the-art application. Using modern development tools, your Angular application will be cutting-edge. With such a strong grasp of the migration process, our team can use tricks and solutions to improve the efficiency of your application resulting in greater user satisfaction.

Moreover, you can take this opportunity to redesign and renew your application. With your direction we will provide a fresh look and new functionality, transforming your application and user experience.

ANALYSIS

We will analyse your specific Angular JS migration needs and circumstances and advise you on how to best do it, taking onboard your input and preferences.

SPECIFICATION AND PLANNING

Based on your exacting specifications we will develop a detailed plan of action for your migration.

ORGANISATION AND PROCESSES

We will analyse the effects of our work on your organisation and processes, putting in limiting protocols to prevent or reduce interference.

IMPLEMENTATION, TESTING AND HANDOVER

Based on the analysis and your specifications, we will begin implementation of the migration process. We will then test, fix/ improve and ultimately hand-over.
